

## MASSACHUSETTS MANUFACTURING EXTENSION PARTNERSHIP (MASSMEP)

MassMEP is a collaborative center comprised of government, business, and academic partners dedicated to helping Massachusetts manufacturers meet the challenges of competing in an ever-changing economy. MassMEP provides Massachusetts manufacturers with the resources they need to prepare for success in today's advanced manufacturing environment. With real-world experience and expertise, MassMEP partners have the unique ability to help manufacturers identify, analyze, and overcome strategic, operational, and workforce challenges that may be blocking their path to growth and success.

The MEP Center offers a comprehensive set of resources, services, and support grouped into three core areas of expertise designed to help deliver positive, measurable, and sustainable growth to your company's top and bottom lines: Operational Excellence, Workforce Strategies, and Innovative Growth Solutions

## TEGRA MEDICAL INVESTS IN AN IN-HOUSE APPRENTICESHIP MODEL

**ABOUT TEGRA MEDICAL.** Tegra Medical, based in Franklin, Massachusetts, is a premier contract manufacturer specializing in medical instruments. Committed to efficiency and quality, Tegra Medical focuses on enhancing production processes and delivering top-tier products for the medical field while prioritizing employee development. Their services range from prototyping and design for manufacturability to full-scale production, assembly, and packaging.

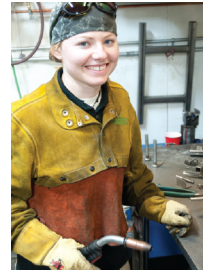

**THE CHALLENGE.** Tegra Medical needed to accelerate skill development for current and new employees. Senior Manufacturing Engineer/Apprentice Administrator Ken Nadeau identified the importance of equipping staff with essential manufacturing skills and established an apprenticeship program within the company. He, along with staff in Operations, collaborated with trade schools to recruit promising graduates interested in pursuing a manufacturing career at Tegra Medical. Nadeau sought support from MassMEP, part of the MEP National Network™.

**MEP CENTER'S ROLE.** MassMEP identified Tooling U training as an ideal solution to effectively onboard new apprentices. Tooling U is an online learning platform with over 600 classes that manufacturers purchase subscriptions to through MassMEP to onboard new employees and apprentices. Tooling U has a section dedicated to manufacturing with courses ranging from "Lean, Additive, and Safety" to "Smart Manufacturing," which MassMEP clients find very user-friendly and extremely helpful. Many MassMEP clients use Tooling U to onboard new employees to and help get them familiar with lean concepts in manufacturing.

Tegra Medical has provided Tooling U training as an onboarding requirement for new operators, including the course, "Tool & Die Maker, Swiss Machining, Precision." The training gives Tegra Medical a benchmark on employee skills, while allowing the employees to take the training in a relaxed online environment.

**"Since the kickoff of our first training curriculum, we have implemented Tooling U into all of our apprenticeship programs to supplement the skill development of our employees through online training modules. Each of our apprentices look forward to challenging themselves each week with more complex classes. A seamless partnership with Mass MEP has made that possible year after year at Tegra Medical."**

-Ken Nadeau, Senior Manufacturing Engineer/Apprentice Administrator

## RESULTS

10 -20% improvement in production efficiency

\$144,576 in training
