

ENTERPRISE MINNESOTA

Enterprise Minnesota consults with small and medium size manufacturing companies to help them compete and grow profitably. We also serve as the “voice” for the industry, raising visibility and appreciation for the value manufacturers provide our communities and the state’s economy.

Our connection to the National Institute of Standards and Technology's Manufacturing Extension Partnership (NIST MEP) further positions us to offer clients leading-edge services to improve manufacturing operations and strengthen business.

AN EYE-OPENING EXPERIENCE

ABOUT MIDWEST METAL PRODUCTS INC. Midwest Metal Products (MMP) is an ISO 9001-2015 certified ferrous foundry with 55 employees located in Winona, Minnesota. As a locally owned manufacturing company with a single facility, Midwest Metal Products can respond quickly to customer demands and offers castability design assistance, production flexibility, and has two metallurgists on staff. MMP serves a variety of industries including directional drilling, tunneling, mining, defense, oil & gas, waste to energy, and many other OEMs across the Midwest, eastern, and southern U.S.

THE CHALLENGE. Several years ago, President Joe Plunger recognized the need to incorporate more colleagues into the business planning process and to help prepare organizational leadership successors. Those future leaders determined the business had a strategy, but it was mostly in Joe's head, and everyone wanted to get that vision out and bring the organization up to speed. Joe had worked with Enterprise Minnesota, part of the MEP National Network™, in the past and connected with his local representative to learn about available business strategy and succession planning services.

MEP CENTER'S ROLE. Working with business consultant Steve Haarstad has helped the Midwest Metal Products team clarify the company's vision and mission. Through the project work, the MMP leadership team has put in place organizational goals and defined its values. Ultimately, it has made the employees' lives better and easier because MMP now has a better foundation to guide their decision-making process. Understanding how a situation fits into the overall goals and strategies allows the team to make quick and solid decisions that move the company in the right direction. In addition, the Midwest Metal Products leadership team has made improvements to how they operate, and the workers can see and feel the changes. Through quarterly strategic and annual all-staff meetings, MMP leaders talk about activities, business operations, goals, and progress. They pass down organizational knowledge and business results to help production employees understand the value they bring and how everyone contributes to creating and benefiting from a profitable business.

"Working with Steve has been a nice evolution, both for our business strategy and plans, as well as team building for the key employees in the facility. I'm a proponent of the process and tell others about working with Enterprise Minnesota. I've had my eyes opened to the value."

-Joe Plunger, President & Owner

RESULTS

9 jobs created or retained

New or retained sales in excess of **\$1,000,000**

\$202,000 in new investment in plant and equipment

\$65,000 invested in new products or processes
