PENNSYLVANIA MANUFACTURING EXTENSION PARTNERSHIP (PA MEP)

PA MEP serves small and medium sized manufacturers in the state by enhancing their productivity and technological performance to create a positive and enduring economic impact in their communities and in Pennsylvania. Small and medium-sized manufacturing companies represent 12% of the total gross state product. According to the U.S. Policy Institute, Pennsylvania ranks 5th in the nation among all the states in manufacturing employment. Manufacturing businesses provide over 578,000 jobs in Pennsylvania, representing approximately one out of every 11 jobs in the state. Managed by the Pennsylvania Industrial Resource Center Foundation, the PA MEP is a public-private partnership sponsored by NIST MEP. The PA MEP is also supported by the Pennsylvania Department of Community and Economic Development and by the manufacturers who receive essential training and consulting services to increase competitiveness and grow their companies.

To serve the regional diversity of the state’s manufacturing base, PA MEP manages MEP federal funding and program outcomes for a network of seven Industrial Resource Centers who are regional affiliates strategically focused on meeting the needs of the geographic region. Affiliates include: Catalyst Connection (southwest); DVIRC (southeast); IMC (central); MANTEC (south central); MRC (Lehigh Valley); NEPIRC (northeast); and NWIRC (northwest).
ABOUT ADVENT DESIGN CORPORATION. Advent Design Corporation is an ISO 9001-certified, award-winning company that provides businesses with custom engineering solutions. Located in the Historic Mill of Bristol, PA, Advent provides an array of services aimed at helping U.S. manufacturers become more competitive in a global economy. It is the breadth of services — all focused on the unique needs of manufacturing — that differentiates Advent Design from other engineering companies, custom equipment builders, product development firms, and contract manufacturers. Each individual service the business offers is designed to complement and enhance each of the other services that Advent Design provides. The company has approximately 125 employees.

THE CHALLENGE. For the past few years, Advent Design experienced historic growth, both organically and inorganically. The business had significantly grown its Tesco Brand within the utility market, and had developed new products under that brand, while sustaining and making more profitable its contract equipment manufacturing and contract packaging/distribution business. Company leaders had also looked at many acquisition targets and successfully made three acquisitions within two years. Prior to and during this period of growth, company ownership sought the help of DVIRC to look at the business strategically to ensure future success.

MEP CENTER'S ROLE. Advent Design was looking for strategic help with the business in a few areas, but overall, Advent's goal was to get some outside perspective. They asked DVIRC to evaluate and value their business. In addition, their Management team wanted some outside help with Strategic Planning and implementation of that Strategic Plan throughout the year. Lastly, the company’s owners joined DVIRC’s Executive Network Groups to gain counsel from other local manufacturing business owners to strengthen management decisions and decision-making, planning, troubleshooting and bench-marking. DVIRC’s Network Groups provide a unique opportunity for business leaders from various industries to come together in a confidential setting to share and solve common challenges, adopt best practices, and gain new leadership skills.

RESULTS

$500,000 in increased sales
10 jobs created
10 jobs retained
$200,000 in cost saving
$50,000 savings on investments
