Proceedings of the
11th CIRP Conference on
Modeling of Machining Operations

National Institute of Standards and Technology (NIST)
Manufacturing Engineering Laboratory
Manufacturing Metrology Division
Gaithersburg, MD 20899 USA

September 16-18, 2008

Editors
Jarred C. Heigel
Shawn P. Moylan
Robert W. Ivester
COMMITTEE MEMBERS

Chairman
Dr. R. W. Ivester
National Institute of Standards and Technology
Manufacturing Engineering Laboratory
100 Bureau Drive
Gaithersburg, MD 20899-0106 USA
+1 (301) 975-4525

Co-Chairmen

Prof. I. S. Jawahir
University of Kentucky
Machining Department
414C, CRMS Building
Lexington, KY 40506-0108 USA
+1 (859) 257-6262 ext. 207

Prof. P. J. Arrazola
Mondragon University
Manufacturing Department,
Faculty of Engineering
Loramendi, 4
20500 Arrasate/Mondragon, Spain
+34 943 73 96 64

Organizing Committee

Dr. R. W. Ivester, NIST, USA
Prof. P. Arrazola, Mondragon Univ., Spain
Mr. E. Whitenton, NIST, USA
Mr. J. C. Heigel, NIST, USA
Dr. J. Soons, NIST, USA
Dr. S. Moylan, NIST, USA

International Scientific Committee

Prof. T. Altan, USA
Prof. Y. Altintas, Canada
Prof. P. J. Arrazola, Spain
Dr. S. Bontha, USA
Prof. K. -D. Bouzakis, Greece
Prof. G. Byrne, Ireland
Prof. E. Ceretti, Italy
Prof. H. Chandrasekaran, Sweden
Prof. M. A. Davies, USA
Prof. O. W. Dillon, USA
Prof. D. A. Dornfeld, USA
Prof. L. Filice, Italy
Prof. W. Grzesik, Poland
Dr. R. Ivester, USA
Prof. I. S. Jawahir, USA
Prof. F. Klocke, Germany
Prof. J. -L. Lebrun, France
Dr. J. Leopold, Germany
Prof. T. Matsumura, Japan
Prof. F. Micari, Italy
Dr. S. Moylan, USA
Dr. R. M'Saoubi, Sweden
Prof. J. C. Outeiro, Portugal

Prof. L. Settineri, Italy
Dr. J. P. Snyder, USA
Dr. D. Umbrello, Italy
FOREWORD

Though titled the “11th CIRP Conference on Modeling of Machining Operations,” this conference is a continuation of the ten previous installments of the “CIRP International Workshop on Modeling of Machining Operations” series and is the first to be labeled a conference. While the first workshop was held in Atlanta, Georgia, USA in 1998, the series has its origins in the Working Group on “Modeling of Machining Operations,” established in 1995 within the CIRP Scientific Technical Committee for Cutting [STC C]. The aim of this group continues to be the goal of the Workshop and Conference series: to stimulate the development of models capable of quantitatively predicting the performance of metal cutting operations better adapted to the needs of the metal cutting industry. We attempt to achieve this goal by bringing together international experts from industry and academia to present recent advances in the modeling of machining operations and to stimulate constructive discussion between model developers and users that will hopefully lead to better, more directed future research in the field. We believe that the outstanding scientific content of the papers and presentations provide significant advancements in the modeling of machining operations, and we encourage conference participants to both learn from these works and contribute to the dialog they produce.

The Editors
ACKNOWLEDGEMENTS

The members of the Organizing Committee of the 11th CIRP Conference on Modeling of Machining Operations are pleased to acknowledge the following individuals, groups, and organizations that have helped make this conference a success:

- The CIRP—The International Academy for Production Engineering—for their sponsorship of the conference
- The financial sponsors Third Waves Systems Inc. and Kennametal Inc. for their generous support
- The National Institute of Standards and Technology (NIST) for hosting the event
- The conference support staff at NIST for their help in the logistical planning of conference events
- The Visual Arts and Photography Services staff at NIST for their support in publishing these conference proceedings
- The authors and the reviewers for their technical contributions as well as their cooperation with the editorial staff
- The organizers of the ten previous Workshops on Modeling of Machining Operations for helping to grow the community and providing guidance for the current conference.

Finally, we would like to thank the conference participants and keynote speakers for their enthusiasm and hard work to further the modeling community.

The Organizing Committee

DISCLAIMER

These proceedings contain technical papers contributed by participants of the conference. This publication provides the material as submitted to the conference in its original form, without modification by the National Institute of Standards and Technology (NIST). The opinions expressed in papers by non-NIST authors are not necessarily the opinions of NIST.

Commercial equipment and software referred to in this document are identified for informational purposes only. Such identification does not imply recommendation of or endorsement by NIST, nor does it imply that the products are the best available for the purpose.

It is NIST’s policy to use the International System of Units (SI). However, some of the units used in papers by non-NIST authors are in U.S. customary units.
# TABLE OF CONTENTS

**Modeling in the New Industrial Age: Priorities for Leaders and Engineers**
K. Marusich

## Machining Processes

- **Development of Cutting Insert Geometry for Face Milling of Titanium Alloys**
  S. Bontha, T. J. Long, and P. D. Prichard

- **Model Based Optimization of Trochoidal Roughing of Titanium**
  F. Klocke, T. Bergs, M. Meinecke, C. Kords, M. Minoufekr, M. Witty, and L. Glasmacher

- **Modeling and Optimization of Machining of High Temperature Nickel Alloy for Improved Machining Performance and Enhanced Sustainability**
  F. Pusavec, A. Deshpande, R. M'Saoubi, J. Kopac, O. W. Dillon, Jr., and I. S. Jawahir

- **Simulation of a Self-deburring Drilling Process based on Local Material Modification**
  R. Neugebauer, C. Harzbecker, G. Schmidt, M. Dix, and J. Schönherr

- **Finite Element Modeling and Simulation of Laser-Assisted Machining of Inconel 718**
  B. Shi, H. Attia, R. Vargas, and S. Tavakoli

- **Modelling and Analysis of Machining Parameters in EDM and Ultrasonic Assisted EDM of Tungsten Carbide (WC-10%Co)**
  M. R. Shabgard and M. R. Farahmand

- **Cutting Forces Evaluation in Milling using an Analytical /Finite Element Mixed Approach**
  E. Rivière-Lorphèvre, J. Barboza, E. Filippi, and L. D’Alvise

- **Evaluation of Accuracy in 2D and 3D Simulation of Orthogonal Cutting Process**
  E. Ceretti, A. Attanasio, C. Giardini, L. Filice, S. Rizzuti, and D. Umbrello

- **Finite Element Modeling of Thread Tapping Processes**

## Machining Induced Residual Stresses

- **Influence of Cutting Conditions on Residual Stresses Induced by Hard Turning of AISI H13 Tool Steel**
  J. C. Outeiro, J. C. Pina, D. Umbrello, and R. M'Saoubi

- **Cutting Parameters and Tool Geometry Influence on Residual Stress in Turning Operations**
  A. Attanasio, E. Ceretti, and C. Giardini

- **Finite Element Modelling of Machining Induced Residual Stresses, a Comparative Study**
Prediction of Distortion in Thin-Walled Machined Components…………………………105
T. D. Marusich, S. Usui, S. Lankalapalli, K. J. Marusich, and S. Garud

Determination and Implementation of Model Parameters

Implementation of Dynamic Material Property Data in……………………………………..113
Finite-Element Modeling Simulations
J. Heigel, R. Ivester, and E. Whitenton

Tungsten-Copper-Composite Cutting Simulation based on……………………………………121
Microscopic Images
M. Graf von der Schulenburg and E. Uhlmann

Estimation of Zener-Hollomon Parameter in Machining………………………………129
and Microstructure Prediction

Inverse Analysis Methodology to Determine Flow Stress Data for………………139
Finite Element Modeling of Machining
A. Martinez, P. Sartkulvanich, C. A. Rodriguez, and T. Altan

FEM-Based Modelling of the Cutting Process Using Mixed Input Data………………147
W. Grzesik and P. Nieslony

Modeling the Heat Flux as an Input Parameter to Simulate Cutting Process………..155
V. Schulze, R. Pabst, and J. Michna

Machining Dynamics

Finite Element Analysis of Cutting Force Dynamics……………………………………..163
U. Heisel, D. V. Kryvoruchko, V. A. Zaloja, M. Storchak, S. S. Emelyanenko, and S. N. Selivonenko

Modelling the Surface Structure Created by End Milling…………………………171
in the Presence of Tool Vibrations
T. Surmann and D. Biermann

Simulation Concept for Predictive Regenerative Workpiece Vibrations in……….179
Five-Axis Milling
P. Kersting and D. Biermann

Tool Wear and the Formation of White Layers

Simulation of Tool Wear Effects on White Layer Formation in Carbon Steel……..187
C. Fischer

Finite Element Analysis of White Layer Formation during Machining………………191
of Hardened AISI 52100 Steel
D. Umbrello, S. Rizzuti, L. Filice, F. Micari, and I. S. Jawahir
Simulation of Tool Wear in 3D FEM Environment Considering the ........................................199
Tool Geometry Update: the Developed Algorithm
A. Attanasio, E. Ceretti, and C. Giardini

Wear Mechanism and Performance of PVD Coated Tungsten Carbide.........................207
when Milling of Ti6Al4V under MQL
M. S. Ahmad Yasir, C. H. Che Hassan, A. G. Jaharah, M. Norhamidi, H. E. Nagi,
B. Yanuar, and A. I. Gusri

Measurements to Support Modeling

Predicting Endmill Tool Chatter with a Wireless Tool Tip Vibration Sensor ..........215
C. A. Suprock, R. Z. Hassan, R. B. Jerard, and B. K. Fussell

Condition Monitoring for Indexable Carbide End Mill using Acceleration Data ....229
J. L. Milner and J. T. Roth

Measurement and Characterization of Dynamics in .....................................................237
Machining Chip Segmentation
E. Whitenton, J. Heigel, and R. Ivester

The Influence of Cutting Edge Radius on Surface Integrity and Size Effects ..........247
in Dry Turning of Automotive Aluminum Alloy A356 with Diamond Tools
S. Chen and I. S. Jawahir
